# *Backup for Workgroups*™

## *Disk-Based Backup & Disaster Recovery Software for Windows Servers, Desktops & Laptops*

**Up to 96% of all business PCs are not being backed up.**[1]

Are you prepared for data loss? Most businesses are not. Why? Some people simply forget to backup. Some are too busy. And some cannot justify paying for a backup solution that costs more than the computers to backup!

Backup for Workgroups makes it easy and affordable to protect your valuable data. Simply follow the installation wizards to get your disk-based Data Repository up and running to manage and store your backup data. Then install the Backup Client software on the Windows Servers and PCs that you want to backup.

Do you have Exchange Server, Active Directory, or MS-SQL running at your location? The Open File Add-On can include this information in the backup process without interrupting the operation of these services.

And the Data Repository storage can grow with you when you need it. Support for disk spanning allows you to add disk-based storage devices to increase your overall storage capacity. You can even use the built-in Mirror to store a second copy of your backup data to another location.
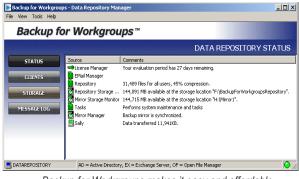

Ensure your ability to restore your data when disaster strikes. Get Backup for Workgroups. It automatically backs up all your networked Windows Servers and Windows workstations, desktops and laptops and ensures your ability to restore a file, directory or your entire computer in minutes.

## PRODUCT HIGHLIGHTS

■ **AUTOMATIC BACKUP** - Protect your data! Set up regular, unattended backups to make sure your files are backed up automatically.

■ **SUPPORTS WINDOWS SERVERS, EXCHANGE SERVER & MS-SQL**
Include your Windows 2008/Vista/2003/2000 Servers and Small Business Servers in the backup process with optional Add-On products. Use the Open File Add-On to backup everything on your Server 2008/2003/SBS 2003, including Exchange, Active Directory, MS-SQL and more.

■ **SUPPORTS WINDOWS 64-BIT & 32-BIT** - You can backup your Exchange Server 2007 running on 64-bit Windows Server 2008 and 2003.

■ **FLEXIBLE STORAGE OPTIONS** - You can use any of the following disk-based devices to store your backup data: internal hard drives, external hard drives, shared folders on other computers, USB hard drives, NAS devices, RAID devices.

■ **SUPPORTS DISK SPANNING** - Need lots of storage space? Now your backup data can span multiple disk-based devices. So when your Data Repository is getting full, simply add another storage device to increase your overall storage capacity.

■ **EMAIL REPORTS KEEP YOU INFORMED OF BACKUP ACTIVITIES** - Keep on top of your backup plan with customized email reports. The Daily Summary Report shows you the big picture of the day's backup activities for all your computers, saving you time and keeping you informed.

■ **FAST & EFFICIENT BACKUP** - After your initial computer backup, only new or changed files are backed up. Backing up just the changed files shortens your backup time and reduces storage requirements and network traffic. File compression further decreases storage space and bandwidth use.

■ **SAVES TIME & MONEY** - Backup for Workgroups is optimized to store backup data to hard drive media instead of tapes. You save time and money when you need to restore your data because you do not need to sort through boxes of tapes. And you use a more reliable storage media that is cheaper

*Backup for Workgroups makes it easy and affordable to backup multiple Windows Servers & PCs*

# Backup for Workgroups ™

## Backup & Disaster Recovery Software
## - for all your Windows Servers & PCs

---
**PRODUCT HIGHLIGHTS**
---

*Backup is a breeze with Backup for Workgroups.*

*Fast & easy data recovery is just a click away!*

*Email reports keep you informed of backup activities.*

---
**RAVE REVIEWS**
---

*"Very impressed with the way the software works... the scheduled backup now takes less than 1 hour overnight - a process which used to take all night using tapes! Tape drives and tapes were lasting only around 1 year, so it's win-win for me with Backup for Workgroups."*

*- Steve Pinch, Meggitt Petroleum Systems*

*"I love the Disaster Recovery Plan printouts, they detail everything to reconstruct an exact duplicate of a crashed system. Other programs I have used backup the data but never really tell you how to actually get the data back in the event of a crash, and the bare metal restore process is great."*

*- Matt Gross, Egg Harbor City Public Schools*

## BACKUP FEATURES

- Automatic Backup with Flexible Scheduler
- Backup Set Wizard
- Backup Only the Files that Change
- Save Multiple File Revisions

## RESTORE FEATURES

- One-button Restore Options
- Single or Multiple File Restores
- File Roll Back & Undelete
- Disaster Recovery & Bare Metal Restore

## DATA STORAGE & MANAGEMENT FEATURES

- 256-bit and 56-bit Encryption
- Compression & Non-Redundant Storage Reduces Storage Requirements
- Sends Backup & Restore Status Emails to Keep You Informed of Backup Activities
- Uses the Disk-Based Storage Devices of Your Choice
- Supports Drive Spanning - Stores Backup Data Across Multiple Drives

---
**SYSTEM REQUIREMENTS**
---

The Data Repository/Backup Server runs on any Windows 2008/Vista/2003/XP/2000 computer and consumes 15 MB storage. Needs access to one or more disk-based storage devices with sufficient free disk space to hold Clients' backup data.

Storage Recommendation: Allow 3X the disk space used by the sum total of all computers to backup.

The Backup Client runs on any Windows 2008/Vista/2003/XP/2000 computer and needs 50 MB storage. TCP/IP access to the Backup Server is required.

---
**PRICING**
---

Client Licenses start at $99 per client, with volume discounts available. The Open File Add-On starts at $199 per client, with volume discounts available.

Government, Educational, and Non-Profit Organization pricing available. Reseller & VAR inquiries welcome.
